Team 3 (Five Guys) – Iteration 2 Status Report

Recruiting & Application Management System · CSI 5324 · October 26, 2026

1. Current Implementation Status

Iteration 2 is complete and released on GitHub (https://github.com/baylor-csi5324-team3/recruiting-system, Release v2.4). The back end (Spring Boot 4, Java 21, H2) implements every use case except User Login; 114 JUnit 5 tests pass on the main branch. The React front end is connected to the back end for the applicant, recruiter and administrator: all pages below read and write real data. Each member worked on a feature branch; 14 pull requests were reviewed and merged. Releases v1.0 (Iteration 1 back end) and v2.0 to v2.4 (Iteration 2) are tagged. The implementation package (zip with README) is on the website.

Status of each use case:

Use case	Owner	Back end	UI	Merged to main
4.2.1.1 Search Available Jobs	Luyu Niu	Done	Done, connected	Yes
4.2.1.2 Register Account	Xinyi Chen	Done	Done, connected	Yes
4.2.1.3 User Login	Xinyi Chen	Not started (Iteration 3); the front end chooses the identity in a role menu	Sign-in dialog only	–
4.2.1.4 Update Applicant Profile	Xinyi Chen	Done (name and phone on the applicant; headline and bio stored in a file on the server)	Done, connected	Yes
4.2.1.5 Submit Job Application	Yuting Mei	Done	Done, connected (React page and plain HTML page)	Yes
4.2.1.6 Save Job Posting	Yuting Mei	Done	Done, connected	Yes
4.2.1.7 Track Application Stage	Spencer Hammack	Done, with stage history	Done, connected (React page and plain HTML page)	Yes
4.2.1.8 Withdraw an Application	Spencer Hammack	Done	Done, connected	Yes
4.2.2.1 Create and Publish a Job Posting	Luyu Niu	Done	Done, connected	Yes
4.2.2.2 Manage Job Posting (edit, close)	Yuting Mei	Done	Done, connected	Yes
4.2.2.3 Review Submitted Applications	Peter Chen	Done, with resume download	Done, connected	Yes
4.2.2.4 Update Application Stage	Peter Chen	Done	Done, connected	Yes
4.2.2.5 Extend Job Offer	Spencer Hammack	Done	Done, connected	Yes
4.2.3.1 Manage Accounts and Roles	Luyu Niu	Done	Done, connected	Yes
Sample jobs CSV + loader	Xinyi Chen	Done	–	Yes

2. Main Roadblocks for Iteration 2

No roadblock prevents completion: the code, documentation, presentation and this report are done. Three points are worth knowing for the demo and for Iteration 3:

- User Login is not implemented. The front end identifies the user through a role menu (seeded applicant, recruiter or administrator) and the API uses identifier headers; this is the first item for Iteration 3.
- Respond to Job Offer was removed after the Iteration 1 review (offers are negotiated outside the system); the recruiter records the outcome with Update Application Stage. Schedule an Interview was replaced by Extend Job Offer.
- The recruiter and administrator pages were connected late in the iteration; their back-end rules are covered by tests; the pages themselves have one test and were checked by hand.

3. Project Website

https://five-guys-project-site-five-guys-si.vercel.app/

The site lists the group name, each member's role and use cases, and links to the repository, the Jira board, the documentation PDF, the releases (v1.0, v2.0–v2.4), the implementation zip and this report.

4. Screenshots of Implemented UIs

All screenshots were taken on October 26, 2026 from the React front end (http://localhost:5173) running against the Spring Boot back end, except the last two, which are the plain HTML pages served by the back end itself. "UI implemented by" names who built the page; the back end of each use case was implemented by its owner unless stated.

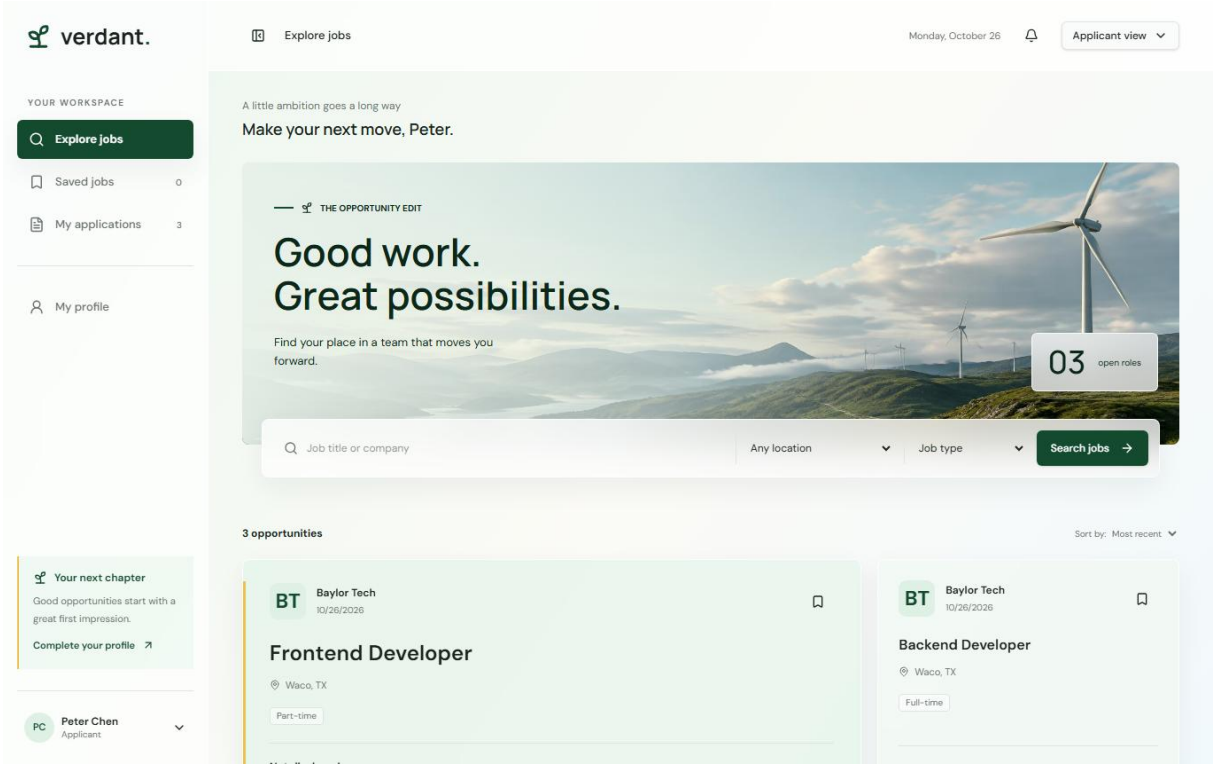

Figure 1. Explore jobs: open postings loaded from the back end, search bar and filters

Relevant use case (owner)	UI implemented by	Connected to back end
4.2.1.1 Search Available Jobs (Luyu Niu)	Yuting Mei (page); back end Luyu Niu	Yes

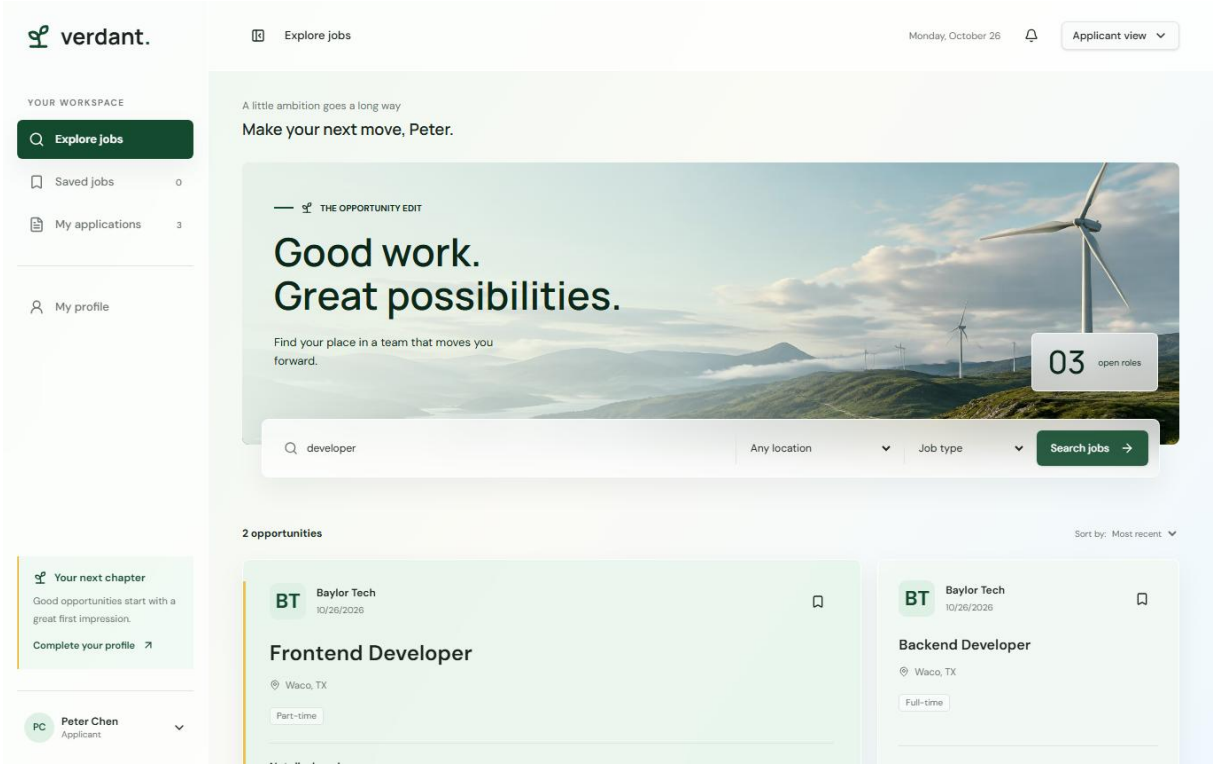

Figure 2. Explore jobs after a keyword search (the filters are sent to the search end point)

Relevant use case (owner)	UI implemented by	Connected to back end
4.2.1.1 Search Available Jobs (Luyu Niu)	Yuting Mei (page); back end Luyu Niu	Yes

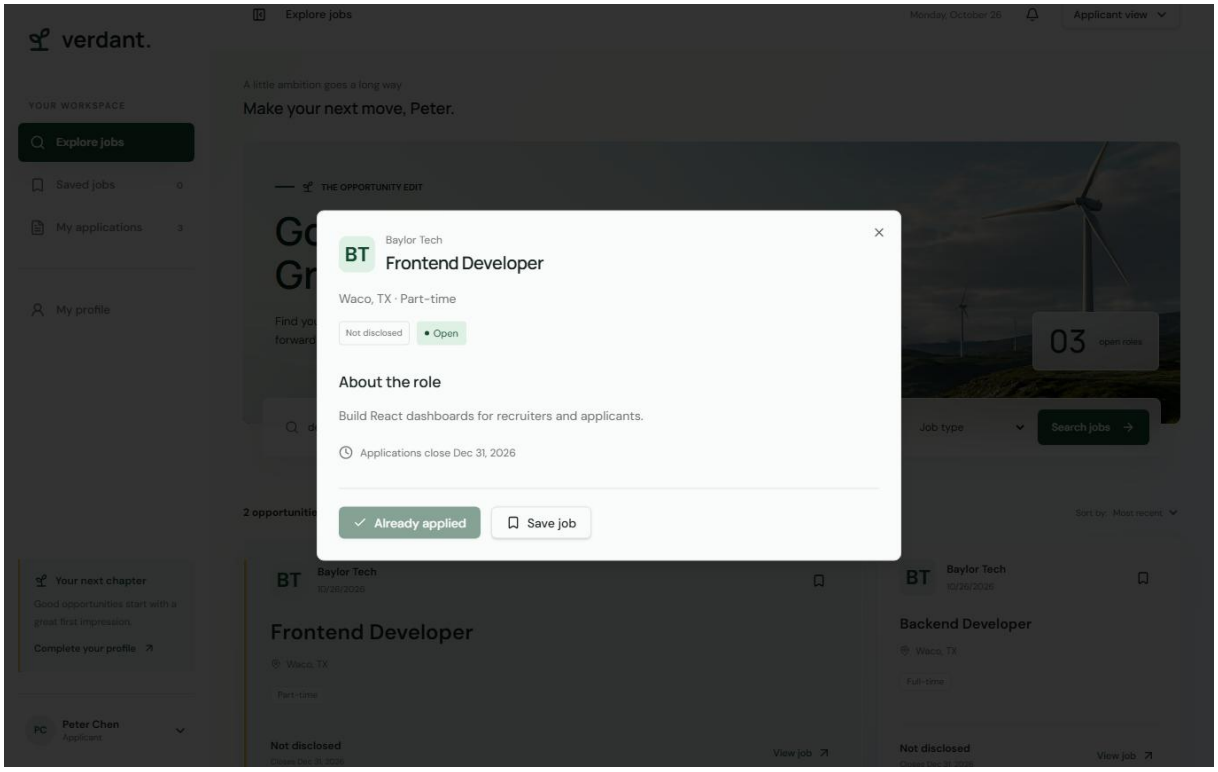

Figure 3. Job details with the Apply form (resume upload and cover letter)

Relevant use case (owner)	**UI implemented by**	**Connected to back end**
4.2.1.5 Submit Job Application (Yuting Mei)	Yuting Mei; back end Yuting Mei	Yes

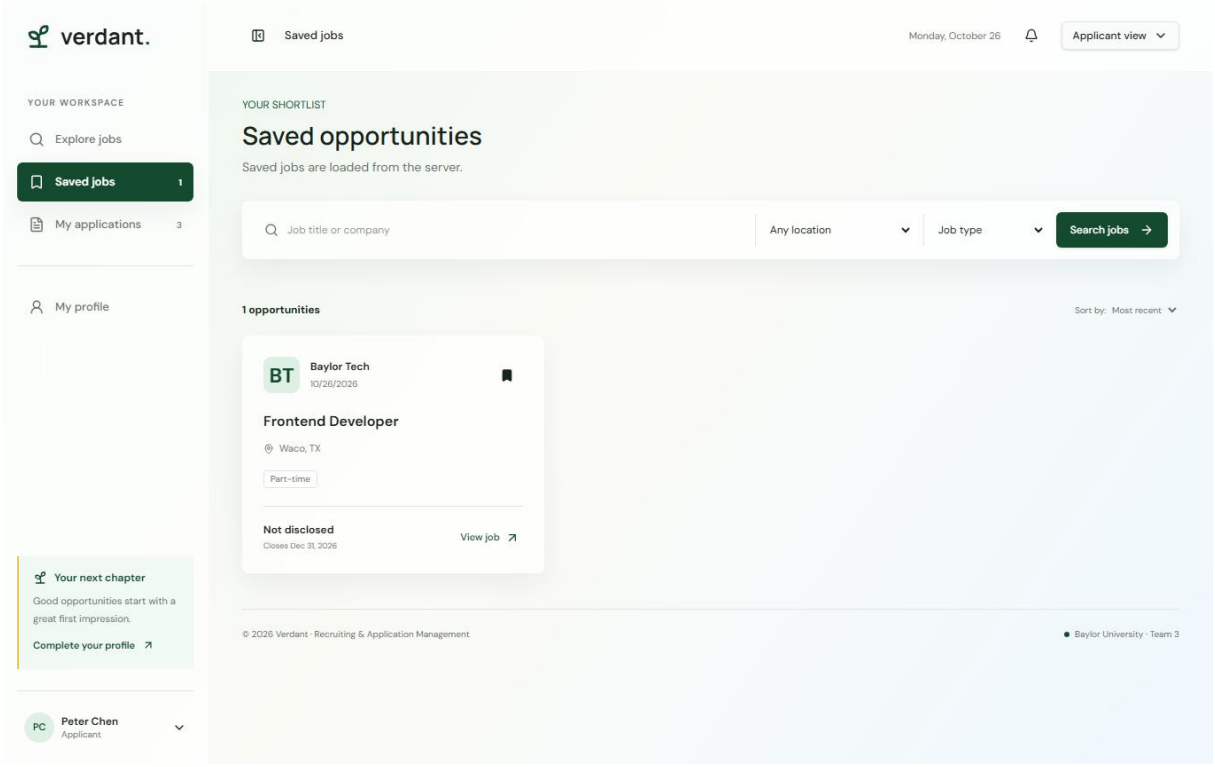

Figure 4. Saved jobs (the saved list is stored on the server)

Relevant use case (owner)	UI implemented by	Connected to back end
4.2.1.6 Save Job Posting (Yuting Mei)	Yuting Mei (page); back end Peter Chen	Yes

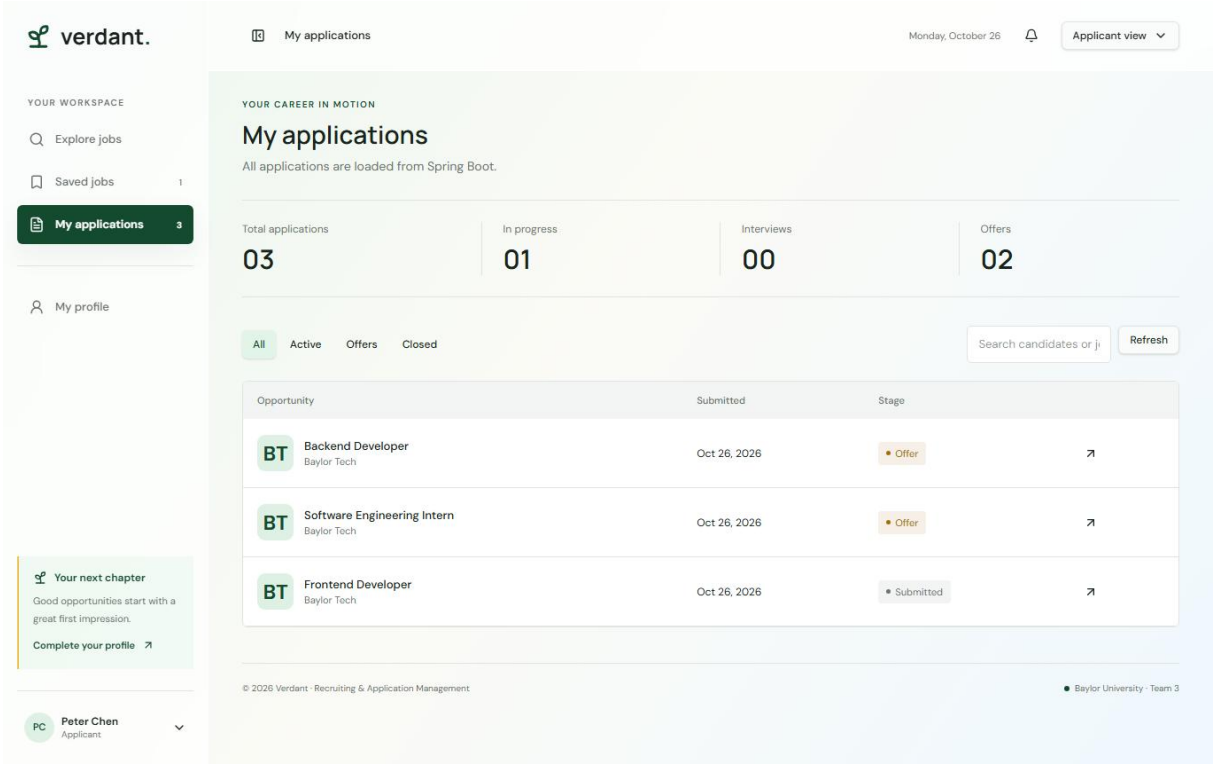

Figure 5. My applications: every application of the applicant with its current stage

Relevant use case (owner)	**UI implemented by**	**Connected to back end**
4.2.1.7 Track Application Stage (Spencer Hammack)	Yuting Mei (page), Peter Chen (integration); back end Spencer Hammack	Yes

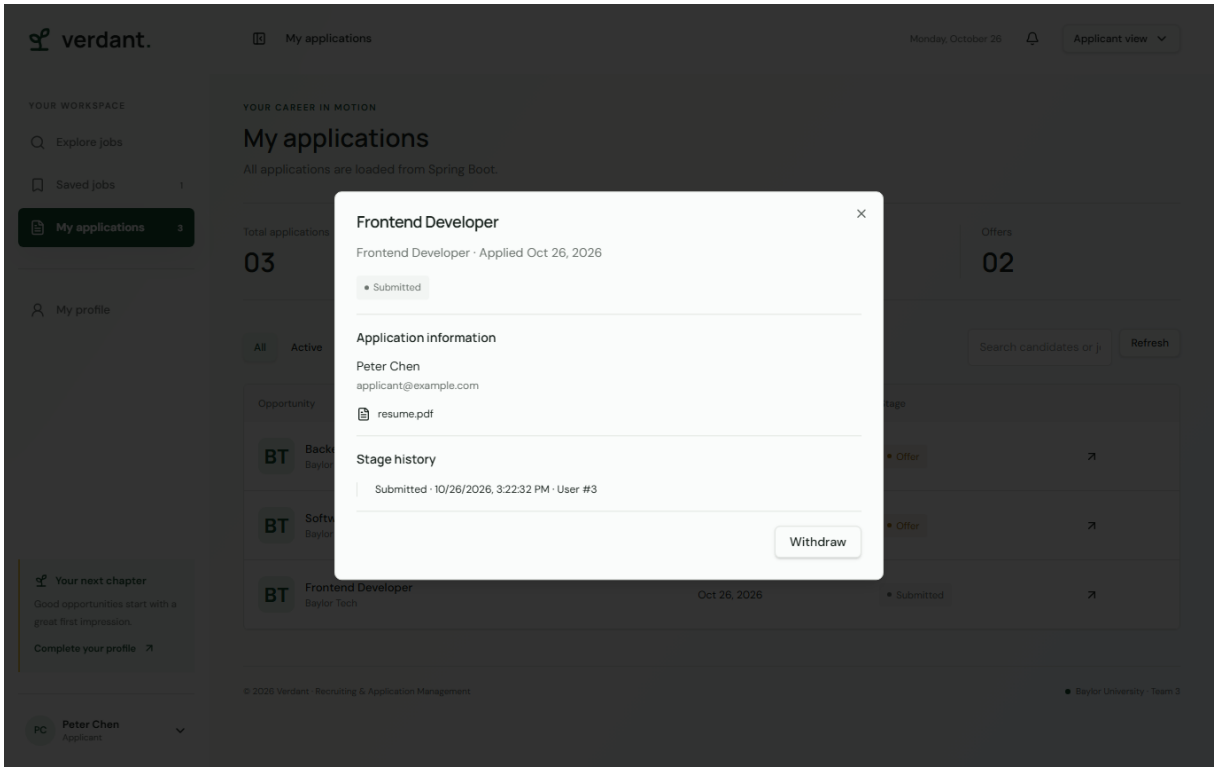

Figure 6. Application details with the stage history and the Withdraw action

Relevant use case (owner)	**UI implemented by**	**Connected to back end**
4.2.1.7 Track Application Stage; 4.2.1.8 Withdraw an Application (Spencer Hammack)	Yuting Mei, Peter Chen; back end Spencer Hammack	Yes

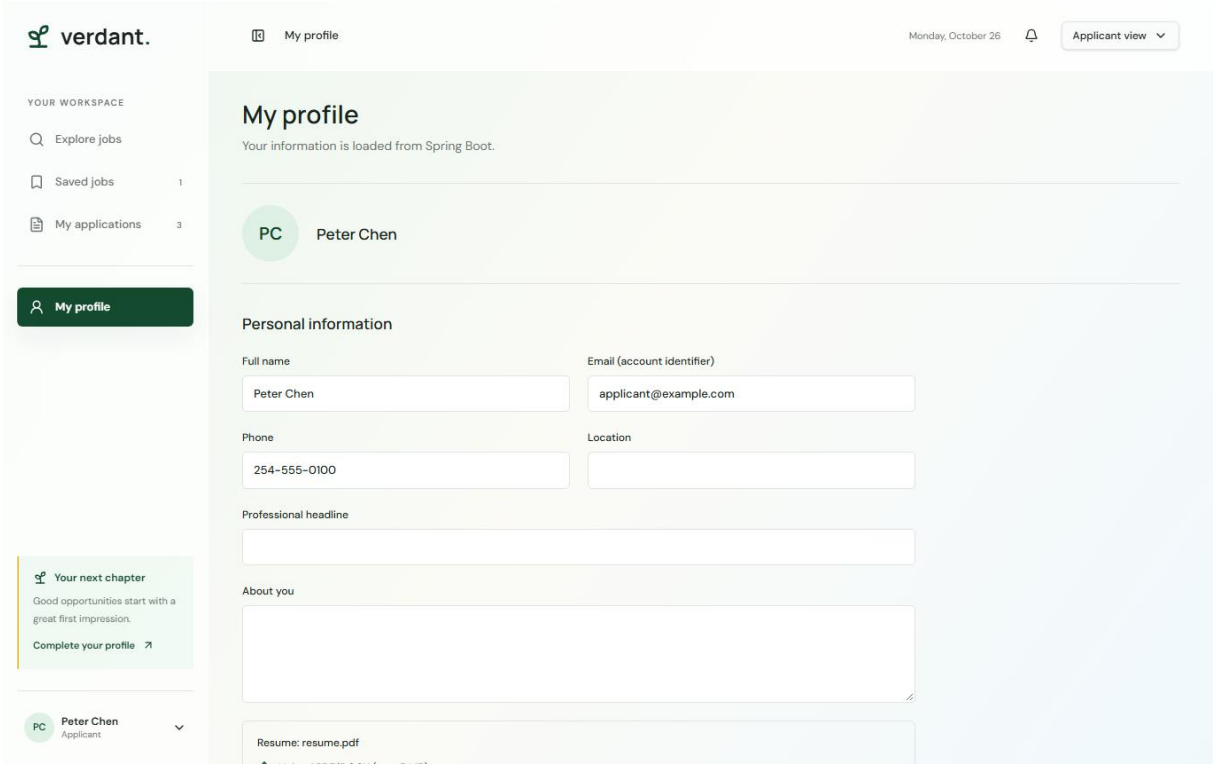

Figure 7. My profile (name and phone are stored on the applicant; headline and bio in a file on the server)

Relevant use case (owner)	UI implemented by	Connected to back end
4.2.1.4 Update Applicant Profile (Xinyi Chen)	Yuting Mei (page), Peter Chen (integration)	Yes

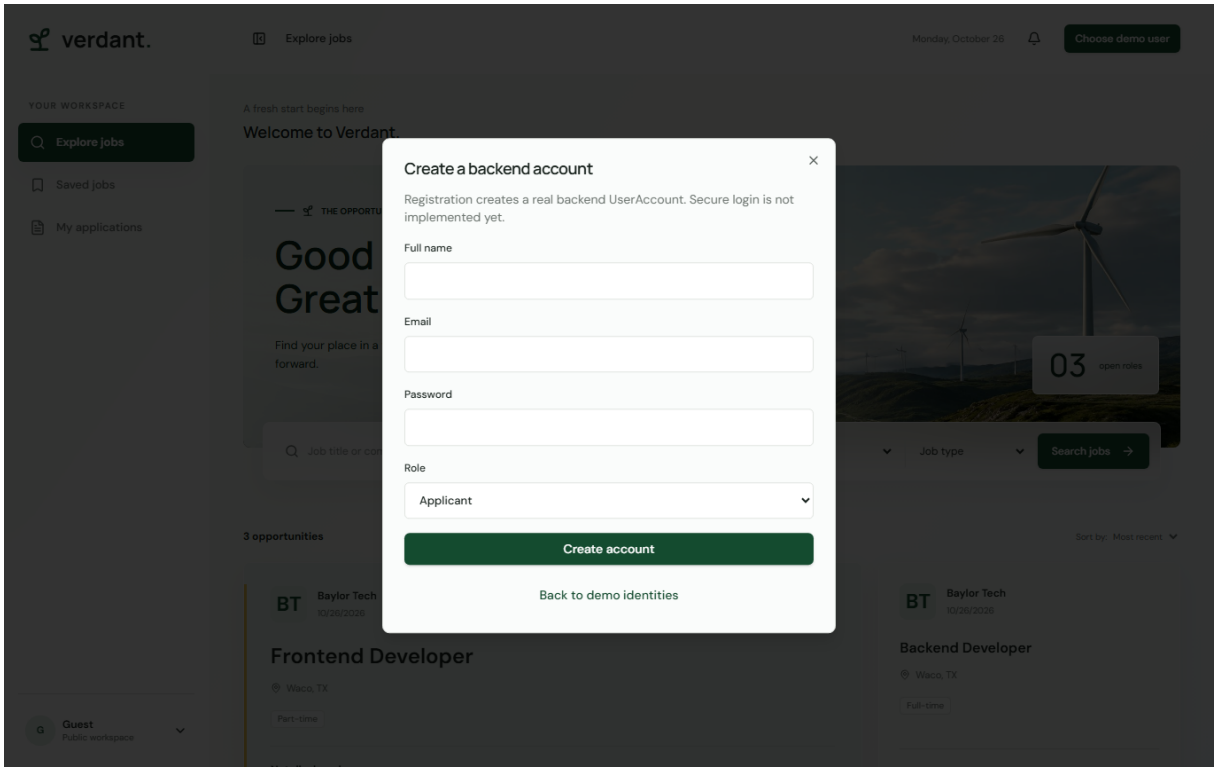

Figure 8. Create an account (full name, e-mail, password, role)

Relevant use case (owner)	**UI implemented by**	**Connected to back end**
4.2.1.2 Register Account (Xinyi Chen)	Yuting Mei (page), Xinyi Chen (form and messages); back end Xinyi Chen	Yes

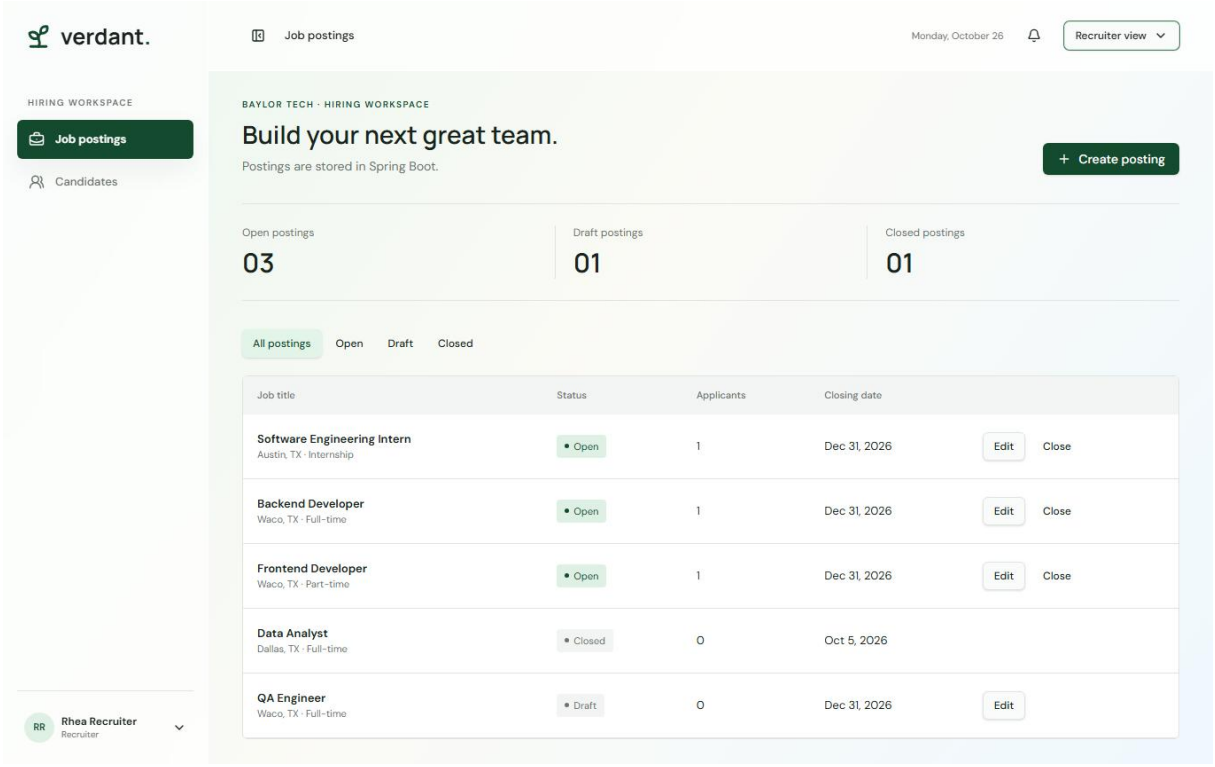

Figure 9. Recruiter job postings: open, draft and closed postings with edit and close actions

Relevant use case (owner)	**UI implemented by**	**Connected to back end**
4.2.2.1 Create and Publish a Job Posting; 4.2.2.2 Manage Job Posting (Luyu Niu; Yuting Mei)	Yuting Mei (page), Peter Chen (integration, edit/close back end); back end Luyu Niu	Yes

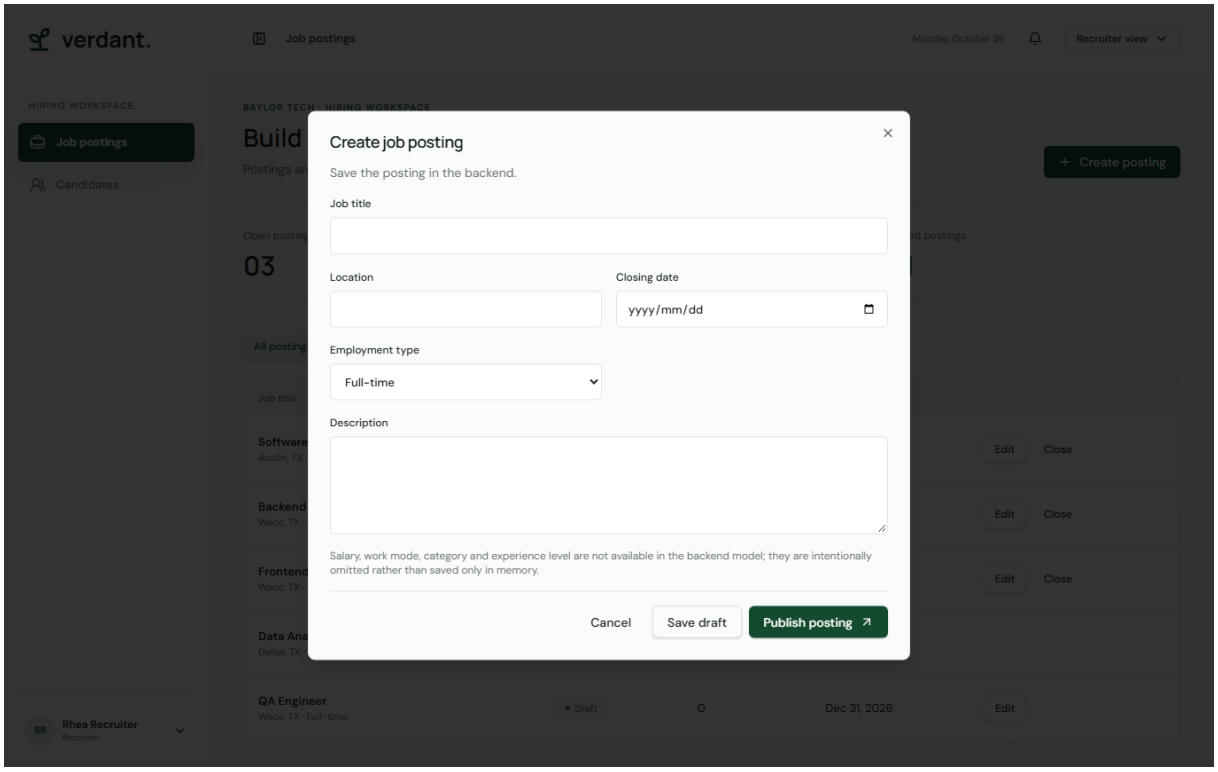

Figure 10. Create job posting form (save as draft or publish)

Relevant use case (owner)	**UI implemented by**	**Connected to back end**
4.2.2.1 Create and Publish a Job Posting (Luyu Niu)	Yuting Mei (page), Peter Chen (integration); back end Luyu Niu	Yes
